Election of Species

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

- I. Figure 5
- II. Figure 6

Figure 2B appears generic to all species. Figures 1A, 1B, 2A, 3, and 4 are prior art.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Art Unit: 3679

The claims are deemed to correspond to the species listed above in the following manner:

Claim 3 corresponds to prior art Figure 4.

Claim 4 corresponds to species I.

Claim 5-7 corresponds to species II.

The following claim(s) are generic: 1, 2, and 8.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons:

an assessment of the prior art with respect to the independent claim provides no unity of invention since the "special technical features", i.e., "the bending stress induced by the joint being substantially inversely proportion to a bending stress induced in the plane of bending by a maximum application load that the fastener shank is subject to", common in the species, is known from the prior art Figure 1B since the end magnitudes are the same when compared to Figure 2B regardless of how the magnitudes were obtained. Applicant should note that the lack of unity is based on a *posteriori* and the special technical features, common to all species, do not define a contribution over the prior:

A telephone call was made to Mr. John D. Franzini on August 21, 2007 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

Art Unit: 3679

distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.
